DATA DRIVEN PLANNING AND IMPLEMENTATION

What is the training about?

- Data Driven Planning and Implementation (DDPI) is customised to either Circuit Managers or Curriculum Officials and explores the relationship between SA-SAMS, the Valistractor and the DDD dashboard. Within DDPI, the five areas which relate to circuit managers' and curriculum officials' duties are interrogated. These areas include: norms and standards for funding, curriculum management, learner attendance, educator profiling, educator attendance and post establishment.

How long is the training? 3 days

What is covered?

- Foundation dashboard training
- High level overview of the Valistractor
- High level overview of SA-SAMS
- Circuit Management:
 - The school profiling tool seeks to assist the target audience to consolidate all the necessary information about their schools using the data on the DDD dashboard. This profiling tool will place the target audience in a better position to support their schools in a data-informed manner. Furthermore, efficiency will be improved as travelling costs to collect the data directly from schools will be minimised.
- Curriculum Management:
 - School Performance profiling by subject, Subject profiling by grade, Educator profiling and Intervention design by subject/phase.
